This is quite a heavy unit because it’s big and it’s made of steel. We’d like to recommend that you build this with a friend. It will be easier and more fun.

1. Place 2 uprights (A) on the floor as shown inserting 8 bolts (B) through the holes in contact with the floor.

2. Set top shelf (C) (furthest from wheel mounts) in place over bolts and insert 4 additional bolts at side locations. Hand tighten the nut over the bolt that is against the floor. Please note: fasten nut with the plastic end facing out. Tighten the two side bolts using the wrench and key (F).

3. Use hex key and flat wrench in combination to tighten securely.

4. Attach the two remaining uprights (A) in place, insert nuts (B), attach bolts and tighten.

Tip: Once all bolts are attached; tap them to make sure they are tightened completely. Loose bolts will jingle.

5. Install Dividers. While cart is lying on its back, insert the dividers (D) through the holes on the bottom shelf, insert screws (B) through bottom of shelf and tighten snugly, but do not overtighten.

6. Install all wheels and tighten with provided wrench. It is recommended that locking wheels are mounted diagonally across from one another.

Stand cart upright. Install remaining dividers on top shelf as described in Step 4. Inspect and tighten all the bolts, nuts and screws using the wrench and key. If cart does not roll smoothly, ensure caster brake is firmly in “OFF” position.

Caution: Always move cart by grasping uprights – NOT Hoops.
